Azure AI Foundry

# Build Azure AI apps and agents—your way

Launch into innovation with customizable AI application templates. Use Visual Studio Code or GitHub Codespaces to edit and deploy directly to Azure.

Select the use case that aligns with your goals or begin experimenting at your own pace.

SOLUTIONS

# Get started with AI agents

## Deploy a chat app powered by Azure AI Agent and AI Search

Develop a web-based chat application with an integrated AI agent using Azure Container Apps. This solution retrieves knowledge from your uploaded files using Azure AI Search and provides responses with citations making it ideal for document-rich environments.

SOLUTIONS

# Get started with AI agents

This architecture integrates Azure AI Foundry, Azure AI Search, and Azure Container Apps to deliver an intelligent chat experience. The front end and back-end handle user interactions and connect to the AI Agent Service for retrieval and response generation.

[Learn More](#)

# Conversation knowledge mining

Transform unstructured audio and text into actionable intelligence

Use Azure AI to analyze large volumes of conversation data. This solution extracts key topics, trends, and relationships, helping you uncover insights and patterns hidden in customer calls, support transcripts, or internal communications.

SOLUTIONS

# Conversation knowledge mining

The architecture ingests call transcripts and audio files, applies AI services for enrichment and structuring, and surfaces insights via an interactive web experience.

# Document generation and summarization

Create drafts and summaries from unstructured documents

Start with your data and end with usable content. This solution automatically identifies relevant files, extracts meaningful information, and generates structured drafts helping you scale document workflows with AI.

SOLUTIONS

# Document generation and summarization

This architecture uses Azure AI Services, Azure AI Search, and Azure OpenAI Service to process and index documents, retrieve relevant content, and generate summaries or templates through a web-based interface.
